

FIXTURE — per-test CONTENT, staging_mode: per-test (DR-133, amended S543). Owned by exactly ONE spec: sidecar-mime-coverage.integration.test.ts. Do not stage from a second spec: identity in source_documents is content-hash FIRST, so two specs staging identical bytes share one row and the later stagings memo-SKIP. This document exists because Inv-7 asserts each MIME extracts to NON-EMPTY content_chunks, and a blank extraction form is a weak subject for that claim — a form can chunk while carrying no content anyone would want extracted. MIME under test: pdf. Its certification token SFG 20000 is its alone.

Supplier profile - Northgate Rail Services Ltd (Synthetic)

Northgate Rail Services Ltd is a fictional supplier used as synthetic pipeline-test content and carries no real company, client or contract information. The company provides track-side inspection and asset-condition reporting to regional rail operators and infrastructure owners.

Delivery model

Northgate Rail Services Ltd works to possession windows agreed with the operator, returns inspection data within 48 hours of each shift, and reviews performance monthly against the measures agreed at contract award.

Quality and assurance

The Northgate Rail Services Ltd management system is certified to SFG 20000 by an accredited certification body, subject to annual surveillance. Evidence of the current certificate is issued to buyers at contract award.

Governance

A small executive team holds delivery, assurance and commercial. Escalation routes are published at award and exercised during mobilisation.
